Task 4

Test and review someone else's class project

Description

- Test someone else's application and find weak spots:
 1. Share your Code (or a video demonstrating *all* features) + all the requirements from unit 1 with another group
 2. Check the application from another group (especially the specified requirements)
 3. Find:
 - At least 1 acceptance issue (per group member) + textual solution:
 - confusing layout, logic flaws, missing confirmation messages, inconsistencies related to user requirements
 - Optional: technical issues:
 - crashes, wrong calculation (through input), missing input validation, bugs, missing error handling

Submission

- 1 combined(!) PDF document:
 - use the submission format in the given document (Review) on Moodle!
 - combine:
 - the requirements list including checkmarks (✓)
 - the filled-out review document
- The PDF should include:
 - Checked (✓) requirements list
 - Bug list (structured table given)
 - Bug screenshots + possible solution (textual)

Example – Review Table & Solution

Bug ID	Type	Finder	Short Description
1	Acceptance	Dimitri Darwin	Submitting the registration form with a long email address (25 characters+), the submit button shifts downwards and overlaps with the footer text, making it partially unclickable, especially on smaller screens.
2	Technical	Eireen Earhart	Entering a future birth year (e.g., 2050) or a negative number into the birth year input field results in a negative age calculation without throwing an error or displaying a validation message.

Bug ID 1

* Screenshot *

Possible Solution: Make the registration form layout responsive. Adjust the CSS spacing (margin/padding) so that the submit button always stays above the footer or fix the width of the email field so long text scrolls horizontally inside the input instead of expanding the layout.
